Upgrade Readiness Checklist

From the guide: The Magento Upgrade Playbook

-
- [] 1. composer outdated run — all dependency deltas to target version identified
 - [] 2. Each third-party module: changelog reviewed for target version breaking changes
 - [] 3. Upgrade Compatibility Tool (UCT) report generated and triaged
 - [] 4. Custom around plugins audited against core classes in the target version
 - [] 5. Custom direct DB queries audited against schema changes in the target version
 - [] 6. Test coverage $\geq 60\%$ on checkout, catalog, and integration paths before starting
 - [] 7. Dedicated upgrade environment created, mirroring production config
 - [] 8. Rollback plan defined: what triggers a rollback and who executes it
 - [] 9. Post-upgrade QA test script prepared (not ad-hoc — structured test cases)
 - [] 10. Deploy freeze window checked — upgrade not scheduled during business peak periods
 - [] 11. Post-deploy monitoring plan: what to watch for 72h after production deploy

Based on 22+ years and 50+ enterprise Magento projects.
